01 · NAVIGATION BAR

Navbar

Left: COSPIRA logo + wordmark (uppercase italic). Real-time signal badge: connection state, 2.4ms frequency indicator, WebSocket pulse (green = live).

Right: AI Assist toggle (indigo glow when active) · Live clock · Sign In / User Menu.

Mobile: hamburger → drawer with Live Connect, Dashboard, Projects links.

02 · HERO SECTION

Above the Fold

> ***Video. Games. AI. Co-Browse. One Room.***

PRIMARY HEADLINE

Command Presence.Connect on Your Terms.

SUBHEADLINE

One private room. Video calls, multiplayer games, synchronized watching, shared browsing, and live AI — all running simultaneously. No installs. No friction. No recordings.

LIVE SIGNAL TICKER (ROTATES EVERY 6 SECONDS)

- 🔵 New room created just now

- 🔵 Multiplayer match started 4 seconds ago
- 🔵 System latency stable across all regions

PRIMARY CTA

Start a Private Room → /dashboard

SECONDARY CTA

Random Connect ▸ → /connect

TRUST MICROCOPY (BELOW CTAS)

No signup · No recording · Instant exit · Rooms self-destruct when the host leaves.

03 · WHAT MAKES COSPIRA DIFFERENT

Not a meeting tool. A living room.

Every other platform was built around one idea: video calls. Cospira was built around a different idea entirely — that the people you connect with online deserve more than a talking-head grid.

A Cospira room is a real-time environment. The moment it opens, it can simultaneously carry a video conversation, a multiplayer chess match, a synchronized YouTube session, a shared browser window, and an AI that listens, summarises, and flags what matters. All of it running in one room. Nobody switches tabs. Nobody shares a screen. Nobody pastes a link into chat and hopes for the best.

INSIDE EVERY COSPIRA ROOM

- Real-time video and audio with live captions overlay
- 8+ multiplayer games that run alongside — not instead of — the conversation
- Synchronized video and YouTube playback for everyone in the room
- A shared virtual browser: browse the internet together, in real time
- AI that listens, summarises, and surfaces decisions without being asked
- Live polls and quizzes generated mid-session by the AI

04 · HOW IT WORKS

Watch the system think.

Cospira's matching and room engine doesn't work randomly. It works by understanding intent, language, and context — then connecting people who belong together.

1. **Create a Room**
   Launch a private room in seconds. Choose a mode — Fun, Professional, Ultra, or Mixed. Set a password, generate a link, and share it. Done.
2. **Connect Instantly**
   Participants join through a WebRTC stream that establishes low-latency audio and video immediately. No download, no account required.
3. **Set the Mode**
   Fun mode: games on, no AI summary. Professional mode: AI minutes, no distractions. Ultra mode: zero-trust encryption, mandatory passkey, no screenshots. Mixed: everything enabled.
4. **Interact in Real Time**
   Launch a game, share a YouTube video, open a website together, or let the AI run a live poll. The room expands to fit what you need it to be.
5. **The AI Closes the Loop**
   When the session ends, the AI delivers a structured summary: key decisions, action items, sentiment, and milestones. The conversation becomes a document. The meeting becomes a record.

05 · ROOM MODES — THE FEATURE NOBODY ELSE HAS

One platform. Four different rooms.

Every communication platform forces you to pick: work tool or social tool. Cospira doesn't make you choose. Instead, it lets you set the mode.

🎮 **Fun Mode**
Entertainment and casual socializing. Games are available, no AI meeting summary, no restrictions. The room is yours.

💼 **Professional Mode**
Distraction-free workspace. AI generates structured minutes after every session. Games are disabled. Participants stay focused.

🔒 **Ultra Mode**
Maximum protection. No screenshots. No recording. Mandatory passkey. Zero-trust encryption enforced at the session level. For conversations that cannot be replicated.

⚡ **Mixed Mode**

All features active simultaneously. Games, AI insights, video, browser — the full Cospira environment. When the meeting is the experience.

Mode can be selected at room creation and is enforced across all participants for the full session. No other platform has this.

06 · GAME ARCADE — PLAY TOGETHER. STAY IN THE CONVERSATION.

8 games. Running inside your room.

No tab switching. No separate app. No broken screen share. Cospira games run natively inside the communication room — the video call continues, the chat continues, and the game is just another layer of the same session.

Each game has ranked matchmaking, ELO ratings, and a global leaderboard. Competitive play is built in from the start.

AVAILABLE GAMES

Grand Chess — The ultimate test of intellect. Full chess engine with blunder detection, replay timelines, and theme selection. · 1,248 players Competitive Ranked

Carrom Elite — Precision strikes and tactical pocketing. Physics-simulated board with real inertia. · 892 players Competitive Physics

Kart Racing — Up to 6 players. Real-time racing with cloud-synced positions and race results overlay. · 0 players Multiplayer×6 Fast

Ludo Pro — The ultimate race to victory. 4-player classic with ranked play. · 1,842 players Competitive Classic

Billiards — Physics-accurate pool with cue control, spin, and table feel. · 0 players Skill Physics

UNO — The card game that ends friendships. Multiplayer with full rule enforcement. · 0 players Social Chaotic

Connect Four — Gravity-defying strategy. Fast, tactical, satisfying. · 654 players Arcade Quick

Apex Serpents — Snake & Ladder remastered. Ruthless climb to the top. · 567 players Luck Competitive

Ultimate XOXO — 9 boards, 1 master plan. Tic-tac-toe at a scale that requires real strategy. · 234 players Hardcore Brain

Checkers — Kingdom capture tactics. Classic board, competitive stakes. · 345 players Classic Board

All games include: ELO ranking system · Global leaderboard (OSS — Overall Skill Score) · Tournament brackets · Post-match analytics · Sound effects · Replay viewer.

07 · WATCH TOGETHER — SAME FRAME. SAME TIMESTAMP.

Synchronized watching inside every room.

Cospira rooms support synchronized video and YouTube playback — every participant sees the same frame at the same moment, without screen-sharing lag, without resolution loss, without anyone's network bottlenecking the feed.

The host controls playback. Every play, pause, and seek is mirrored to the room in real time. The conversation continues alongside it. This is what every watch party has been trying to be.

- YouTube sync: paste a URL, everyone watches together
- Video file sync: upload a file, playback is identical for every participant
- Host-controlled: play, pause, seek — mirrored instantly
- Chat stays live alongside the video at all times

08 · CO-BROWSE — BROWSE THE INTERNET TOGETHER

A shared browser inside your room.

Cospira includes a virtual shared browser — a full web session that all room participants can see and interact with in real time. Open any website. Navigate together. No screen sharing. No lag. No one staring at a tiny shared window inside a video call.

- Multi-tab browsing, shared across all participants
- Virtual keyboard for mobile and touch participants
- Performance modes optimized for connection quality
- Viewport controls — everyone sees the same layout
- No screenshots, no data persistence — session closes with the room

This feature is technically complex to build and rare among communication platforms. It means product reviews, shopping together, collaborative research, and live documentation reviews can happen inside a single Cospira room without ever opening another application.

09 · AI INTELLIGENCE — THE SYSTEM THINKS SO YOU DON'T HAVE TO

Focus on the conversation. Let the system handle the noise.

AI in Cospira is not a chatbot in the corner. It is a live operating layer — booted when the session opens, running throughout, delivering output when the session closes.

WHAT THE AI DELIVERS INSIDE EVERY SESSION

🎙️ **Live Captions**

Real-time speech-to-text overlay directly on the video feed. Every word, attributed to every participant, as it is spoken.

📋 **Meeting Intelligence**

After each session: a structured summary containing the gist, key decisions made, action items assigned, milestones identified, and an overall sentiment score. Not a transcript — a structured record.

📊 **AI Polls & Quizzes**

The AI can generate and launch live polls mid-session. Participants vote. Results are displayed. Hosts can end polls, review voter breakdowns, and export results. Quiz mode includes correct-answer scoring.

🛡️ **Behavioural Moderation**

Risk alerts, moderation flags, and friction signals fire in real time. The AI tracks sentiment patterns, identifies escalating dynamics, and surfaces them to hosts before they become problems.

⚡ **Room Intelligence**

AI-powered room mode suggestions, late-join summaries so participants who arrive after the conversation starts can catch up instantly, and dispatch-level event logging for every room action.

> ***Intelligence that disappears when you don't need it.***

10 · RANDOM CONNECT — SEMANTIC MATCHING

We don't match randomly.We match by intent, language, and boundaries.

Random Connect is not a roulette. It is a matching engine. When a participant enters the queue, the system reads their declared intent (casual, focused, networking, play), preferred language, interests, and behavioural score — then finds the closest available match.

THE MATCHING ENGINE, STEP BY STEP

- Profile scan: intent, language, interest tags, age verification
- Behavioural filter: behaviour score below threshold → matched only with similar scores (shadow queue)
- Latency filter: participants within 50ms ping are preferred. Tolerance expands after 10 seconds in queue
- ELO filter (game matches): skill-level-appropriate opponents only
- Match confirmed in under 1 second on average

Video mode or text mode. The engine works identically for both. Interests, language preference, and intent all flow into the same matching pipeline.

11 · PLAYER IDENTITY & ECONOMY

A platform with a living community inside it.

Cospira is not just a communication tool. It has a live player economy — ELO ratings, global rankings, a premium store, and a creator partner programme.

PLAYER IDENTITY

- ELO ratings per game — ranked chess, carrom, and all competitive titles
- OSS (Overall Skill Score) — a composite cross-game ranking, displayed on the global leaderboard
- Player DNA: aggression index, consistency score, tilt probability, win probability — updated after every session

- Avatar frames, banners, and cosmetic items purchasable with coins or gems
- Player profile with full match history, analytics, and ELO progression chart

CREATOR PARTNER PROGRAMME

- Apply for creator status with a unique creator code
- Status levels: Pending → Approved → Partner
- Followers can support creators by entering their code
- Revenue share percentage on every purchase made through a creator's link
- Creator dashboard: follower count, total earnings, revenue tracking

PREMIUM STORE

- Avatar cosmetics, profile frames, and boost items
- Dual currency: coins (earned through play) and gems (premium)
- Inventory system with purchased item tracking and activation

12 · ORGANIZATIONS & ENTERPRISE

Built for teams that need structure.

Cospira Organizations are isolated, multi-tenant environments where teams manage their own rooms, members, roles, and policies independently from the public platform.

ORGANIZATION CAPABILITIES

- Create and manage an isolated org workspace with member roster and role assignment
- Org-level rooms with dedicated signaling and access control
- Breakout rooms: host creates child sessions from a parent room, assigns participants by skill tags using AI Smart Match
- Post-breakout AI analysis: engagement scoring, friction detection, risk detection, post-mortem reports
- Full audit log: every room event — joins, leaves, role changes, policy updates — is logged and searchable
- AI Insights Panel: live risk alerts, moderation flags, and friction signals streamed to org admins
- Organization-only room privacy mode: only verified org members can join

13 · USE CASES

Who uses Cospira.

👥 Remote Teams

Replace the static daily standup with a Mixed-mode Cospira room where the team catches up through video, reviews a shared browser session, and lets the AI generate the minutes automatically. No notetaker needed. No follow-up email.

🎮 Gaming Communities

Host tournaments inside rooms where the game runs alongside team voice, bracket scores update in real time, and the leaderboard reflects every match. A Discord server and a game platform, merged into one room.

🎓 Online Education

Tutors host live sessions with screen-free co-browsing for reference materials, in-session AI quizzes to check comprehension, and automatic summaries for students who attend asynchronously.

🎬 Watch Parties

Synchronized video or YouTube for groups with shared reactions, live chat, and no quality degradation. No browser extension. No sync lag. Works natively in every room.

💼 Hiring & Interviews

Professional-mode rooms with live transcription, AI-generated interview summaries, candidate sentiment scoring, and structured evaluation reports generated after every session. The interview becomes a structured data record.

🌐 Social & Communities

Random Connect matches people by intent and interest — not by random chance. Communities can host casual sessions, focused discussions, networking events, and competitive play in the same platform.

14 · PLATFORM INFRASTRUCTURE

Engineered for the speed of real-time.

Every architectural decision in Cospira is built around one constraint: latency cannot be the reason an experience breaks down.

📡 Mediasoup SFU

A Selective Forwarding Unit architecture routes audio and video streams to participants without re-encoding. Each participant receives only the streams relevant to them, eliminating the bandwidth explosion of peer-to-peer WebRTC at scale.

⚡ Socket.IO Signaling

A unified signaling layer handles every real-time event — joins, leaves, game state updates, AI transcripts, poll results, browser sync — through a single persistent connection. Nothing is polled. Everything is pushed.

🗄️ Hybrid Data Architecture

Supabase (PostgreSQL) for identity, auth, and transactional data. MongoDB for session analytics and room intelligence. Redis for real-time presence, distributed messaging, and ephemeral session state. Each workload uses the right system.

🐳 Containerized Deployment

Docker-based infrastructure behind Nginx/Caddy reverse proxy. Workers cluster horizontally. Designed for Redis cluster mode and BullMQ task queues as traffic scales.

📱 Cross-Platform

React + Vite web app. React Native mobile client. Desktop shell. All three surfaces run identical WebSocket and WebRTC implementations — the same room, everywhere.

15 · THE FUTURE — AI-DRIVEN INTERVIEW INTELLIGENCE

The hiring process, rebuilt from the infrastructure up.

The most expensive part of hiring is the human time it consumes. Screening calls, first-round interviews, evaluation calibration, follow-up notes — every step is manual, unstructured, and impossible to scale without degrading quality.

Cospira is building an AI interview system that runs inside the same room infrastructure — combining live video presence, real-time transcription, and AI evaluation agents into a single structured session. The interview happens. The system handles the rest.

THE SYSTEM DELIVERS

- Live transcription attributed per speaker throughout the interview
- AI-generated candidate evaluation: structured scoring across defined competency dimensions
- Sentiment and confidence indicators tracked across the session timeline
- Automated summary: decisions made, red flags identified, recommended follow-up actions
- Recruiter dashboard with per-candidate comparison across all sessions

- Zero additional tooling: one Cospira room replaces the ATS screening step entirely

This is not a feature on a roadmap. It is a vertical built on infrastructure that already exists — the transcription pipeline, the AI evaluation agents, the session analytics, and the summary engine are all live in the current platform. The interview product is the application layer on top.

16 · PRODUCT ROADMAP

What's live. What's building. What's next.

✓ **Multi-Tenant Organizations** — Isolated team environments with org-level rooms and member management. [Launched]

✓ **Project Workspaces** — Dedicated resource containers with granular access control. [Launched]

✓ **Game Arcade (8+ games)** — Full multiplayer game suite with ELO, tournaments, and leaderboard. [Live]

✓ **AI Meeting Intelligence** — Live captions, post-session summaries, action items, sentiment scoring. [Live]

✓ **Virtual Browser** — Shared co-browsing inside rooms, multi-tab, real-time. [Live]

✓ **Creator Partner Programme** — Revenue share, creator codes, follower tracking. [Live]

◉ **Cloud Computers** — Persistent virtual machines with VS Code built-in inside org workspaces. [Q2 2026]

○ **Team Chat** — End-to-end encrypted messaging for organization members. [Q3 2026]

○ **Enterprise SSO** — SAML/OIDC integration for large organizations. [Q3 2026]

◉ **Automated AI Interviews** — AI agents for dynamic technical and behavioral interview sessions. [Q4 2026]

17 · TRUST & COMPLIANCE

Trusted by Enterprise & Government.

Cospira was designed privacy-first. Not as a policy — as an architectural constraint. Rooms self-destruct. Sessions don't persist. Ultra mode enforces encryption at the session level. The platform cannot be compelled to produce recordings that were never created.

CERTIFICATIONS & STANDARDS

- ISO 27001 Certified
- GDPR Compliant
- SOC 2 Type II
- HIPAA Ready
- Zero-Knowledge Architecture

INFRASTRUCTURE TRUST

- Post-Quantum Cryptography Ready
- Blockchain Audit Logs
- On-Premise Deployment Available
- WebRTC — built on the same standard that secures every modern browser

18 · PRICING

Simple, transparent pricing.

STARTER — $29 / MONTH

- Up to 10 participants
- 10 hours / month
- 1080p streaming
- Basic security
- Community support

PROFESSIONAL — $99 / MONTH ★ MOST POPULAR

- Up to 50 participants
- 100 hours / month
- 4K streaming
- Advanced security + AI translation
- Recording & transcripts
- Priority support

ENTERPRISE — CUSTOM PRICING

- Unlimited participants · Unlimited hours

- 8K streaming · Zero-trust security
- On-premise deployment
- Custom integrations · SLA guarantee
- Dedicated support

19 · FROM THE FOUNDER

Why Cospira.

> ***Digital communication tools have not evolved fast enough to match how people naturally interact.***

Most platforms treat communication as a simple video call. But real interaction involves conversation, collaboration, play, and shared experience. It always has. The tools just haven't caught up.

Cospira was built to bring those elements together into a single environment where communication becomes dynamic, where the session generates structured intelligence, and where two people meeting online can do something together — not just talk.

Our goal is to build the infrastructure for the next generation of real-time interaction. Not a meeting tool. A room.

— Mahesh Bandela Founder, Cospira

20 · FINAL CTA

Create once. Control forever.

Launch a room where the conversation, the game, the video, and the intelligence happen in the same place — simultaneously, without friction, without compromise.

Start a Private Room
